

Does your firewall see it?

Ours does.

Conventional firewalls are blind to the most potentially damaging threats from the Internet. Now, Fortinet can help you see – and stop – what the others miss. Our award-winning **FortiGate™ Antivirus Firewalls** – the only security systems certified by the ICSA for antivirus, firewall, VPN and intrusion detection – use ASIC-powered content processing technology to scan your Web, email and other network applications in real time. So you can stop viruses, worms, intrusions and harmful content before they can enter your network – and lower your total cost in the process.

FORTINET™

Seeing is believing. To see how you can get better security, faster performance and lower TCO visit www.fortinet.com/avfw.
